

The Reilly Center's GLOBES program presents:

America's Water Crisis & What to do About it

Dr. Robert Glennon

The recipient of two National Science Foundation grants, Glennon serves as an advisor to governments, corporations, think tanks, law firms, and NGOs looking to solve serious challenges around water sustainability and planning.

America's water crisis is self-inflicted. Across the United States, even in places that are not particularly dry or hot, communities, farmers, and factories are struggling to find water, and even running out altogether. Our water woes will get worse before they get better because we are slow to change our ways, and because water is the overlooked resource. From the Vegas Strip to faux snow in Atlanta, from mega-farms to Washington's love affair with biofuels, heady extravagances and everyday waste are sucking the nation dry. We cannot engineer our way out of the problem with the usual fixes or zany schemes. America must make hard choices, and Glennon's answer is a provocative market-based system that values water as a commodity and a fundamental human right.
